

Bureau Design System

Bureau's visual language runs on one premise from Connected Intelligence: every interaction leaves a signal, and no single signal tells the story. The system exists to show fragmented data resolving into context.

Bureau sells fraud, risk and identity intelligence to risk and fraud leaders at banks, fintechs, lenders and marketplaces. The product story is a network: identity, device, behavioural and transaction signals unified so that coordinated fraud surfaces before it lands. The brand argues that isolated fraud tools are the wrong model, and the identity is built to look like the newer, sharper alternative.

Brand persona. Serious and elite — consequential decisions, never humour, never mass appeal; attention earned through precision rather than volume. Paired with a young, expressive, technically fluent temperament that takes design risks where the category defaults to safe blue and stock photography. On authority it sits in the middle: a trusted analyst in the room, not an institution issuing a verdict.

Voice and content

Voice. Analytical, declarative, plainly technical. Bureau states what the system does and lets the negative space carry the emphasis. It never jokes, never hypes, never uses exclamation marks.

Sentence shape. A short assertive headline, then a muted second clause that lets the sentence trail off. Full stops mid-headline are deliberate — clauses land as separate signals. Headlines run two or three short lines, never one long one.

Reveal hidden connections across every interaction to make faster. more confident risk decisions.

Connecting Signals. Powering Intelligence. · Move Beyond Detection.
Start Preventing.

Headline casing	Title Case for statements, sentence case when conversational. Pick one per surface and hold it.
Mono labels	Always uppercase — <code>CONNECTED FRAUD SIGNALS</code> , <code>NETWORK MATCH FOUND</code> , <code>PERSON 1.0</code> .
Body	Sentence case, no capitalised product nouns beyond the named intelligence layers.
Person	Second person for the reader's world, third person for Bureau's mechanism. Never "we".
Length	Eyebrows ≤ 4 words. Headlines ≤ 12 words. Supporting copy one sentence at 60% opacity. CTAs two or three words.
Numbers	Stated bare and pre-formatted — <code>12.8M</code> , <code><180ms</code> , <code>93%</code> — with a lower-case fragment underneath.
Emoji	Never. Not in UI, not in copy, not in decks.

Words the brand uses: signal, network, connection, intelligence, resolve, surface, uncover, context, decision, coordinated. **Words it avoids:** revolutionary, seamless, effortless, AI-powered as a standalone claim, next-gen.

Colour

Black Russian carries most of the weight. Electric Violet marks where the system is doing work; a sliver of Cyan marks something live. Coral, peach, ice blue and lime stay in support — used sparingly enough to read as data rather than decoration.

			
Black Russian #000224	Electric Violet #4715FF	Cyan #01FFFF	Coral #FD763A
			
Ink 900 #010439	Ink 800 #111962	Ink 700 #203592	Violet 600 #5244FC
			
Violet 500 #706CFF	Lilac 400 #B082FF	Cyan 300 #A5FFFD	Cyan 100 #E1FFFD
			
Coral 500 #FE988C	Coral 400 #FFA8A1	Coral 300 #FFC4C0	Peach 300 #FFE8DA
			
Peach 200 #FEDEC7	Peach 100 #FCF1EB	Ice 300 #D1DFF9	Ice 100 #EBF3FE
			
Lime 300 #C1F0AA	White #FFFFFF		

- Maximum two background colours per deck or page section run: near-black plus one of white / ice blue.
- White and ice-blue cards alternate as they float on near-black fields, with violet gradient banners between them.
- Violet is never a gradient wash for its own sake; it is a block, a field, or a node.
- Cyan is reserved: live indicators, footer column headers, one mono line on a dark field. Never a fill for a large area.

Type

Denim sets the voice — geometric, generously spaced, tracking `-0.02em` almost everywhere. Regular for headlines and body; Medium for CTAs, card titles and names. **Geist Mono** handles the technical register: bracketed eyebrow tags, category labels, detection callouts, stat readouts and IDs — all uppercase and small, weight 500, 16px.

DISPLAY 3XL · 68 / 68

Intelligence Beyond The Individual.

DISPLAY XL · 48 / 60

Network intelligence, not point solutions.

DISPLAY MD · 20 / 100%

Connecting Signals. Powering Intelligence.

BODY 16 · 140%

Bring identity, device, behavioural and transaction data together to uncover what isolated fraud tools leave behind.

MONO LABEL · 16 / 500 / UPPERCASE
BEYOND FRAUD DETECTION

SCALE	SIZE / LINE HEIGHT	USE
Display 3xl	68 / 68	Hero and title slides
Display 2xl	56 / 62	Statement slides
Display xl	48 / 60	Section openers
Display lg	32 / 100%	Module headings
Display md	20 / 100%	Card titles
Body	18 / 16 / 14 at 140%	Running copy
Caption	Geist Mono Light 20	Captions and IDs

In-use editorial sizes: 72 (hero, 1.28), 60 (slide), 54 (module), 40 (article), 24 (card title), 21 (lede), 118 (stat). Minimum sizes: 24px on a 1920×1080 slide, 14px in UI.

Layout

Asymmetric and gridded. Section inset 136–176px; card padding 48px, module padding 70px; stacks at 18 / 20 / 24 / 48 / 68 / 208px. Everything sits on a 22.041px grid with a 0.501px `#111962` hairline. Negative space does the emphasis — there is one CTA per module, dark or white, with a small chevron. Product UI appears at an angle, cropped past the edge, suggesting depth rather than documenting a screen.

Backgrounds, texture and imagery

The vocabulary is network-inspired and consistent at every scale.

- **Dot / line matrix** — builds world maps, dissolves portraits into pixels, ghosts the wordmark behind footers at ~6% opacity, traces connector lines between nodes.
 - **ASCII textures** (`assets/textures/ascii-magic-1|2|3.png`) — the real bitmaps from the source; layered at 20–88% opacity over dark or white fields. Never redraw them.
 - **Detection overlays** — scan brackets, match markers, dotted paths with coral and violet nodes marking where a relationship surfaced.
 - **People are always treated, never plain** — halftoned over violet, silhouetted against gradients, or framed by a scan bracket with a mono ID label. Imagery is cool, desaturated, high-contrast; violet or cyan tint, no warmth, no grain.
 - Full-bleed photography is rare; when it appears it is cropped into a module, never a hero.
-

Corners, borders, depth

Radius 0 everywhere. Bureau is square — buttons, cards, tags, image frames, icon tiles. Depth comes from 1px hairlines (`#D1DFF9` on white, `rgba(0,2,36,.1)` on light, 20% white on dark) and from layering, never from drop shadows. There are no drop shadows in this system. Cards are flat fill plus hairline inset, or flat fill on a darker field.

Transparency and blur. Opacity is a type tool: supporting copy at 60%, links at 70%, ghosted wordmark at 6%, textures 20–88%. Blur is not part of the language — no frosted panels, no glass. Protection gradients are used once: a white top-down fade to let a texture die out under a headline.

Motion and states

Analytical: things resolve into place, they never bounce. `--ease-standard` is `cubic-bezier(.2,0,.2,1)`, 200ms for state changes, 420ms for entrances, 1.6s for a traced path. Fades and draws only — no scale-up entrances, no springs, no parallax. The one loop is a cyan live pulse (opacity 1 → .35, 1.6s linear) on live indicators.

STATE	TREATMENT
Hover	Opacity to ~0.82 on filled buttons; underlined links go 70% → 100%; cards lift only their hairline to violet. No colour shifts, no shadows.
Press	No shrink, no bounce — opacity only.
Focus	1px violet outline offset 2px, square.
Disabled	40% opacity, <code>not-allowed</code> .

Iconography

The source file draws its glyphs from Streamline Sharp — a licensed, non-redistributable set. The reconstructed vectors are lossy and the set cannot be shipped, so `components/core/Icon.jsx` mounts the closest CDN equivalent: Lucide (`lucide-static@0.544.0`, masked so it inherits `currentColor`). Lucide has rounded caps where Streamline Sharp has square ones.

If you have the Streamline licence, drop the SVGs into `assets/icons/` and point `CDN_BASE` at them — a one-line change.

House rules regardless of set: line icons only, no fills, no colour inside the glyph, 1–1.5px stroke. Icons appear white at 28.78px inside a 60px solid violet `IconTile`, or dark at 20–24px inline. No emoji, no icon font. Brand graphics that are real assets live in `assets/graphics/` — `node-cluster.svg`, `signal-flow.svg`, `signal-lines.svg`, `spark.svg`. Use those rather than drawing network motifs by hand.

Components

Nineteen reusable primitives under `components/`. The attached Figma file is a brand-guideline document, not a component library — inside the scoped frames it defines no UI component families, so the inventory is derived from the recurring UI atoms in Stylescape V.2. Each directory carries `<Name>.jsx`, `<Name>.d.ts`, `<Name>.prompt.md` and one specimen card.

Core

COMPONENT	WHAT IT IS
Button	The CTA construction — dark fill, 16/18px padding, Denim Medium 20px, pixel chevron.
PixelChevron	Five 4px squares in a 12 × 20 box, used after every CTA label.
EyebrowTag	The bracketed uppercase mono chip that opens each module.
Badge	The recurring certification line — SOC 2 Type II Certified · ISO 27001 Certified.
Divider	The 1px hairline rule used throughout the guideline and site modules.
TextLink	The underlined 70%-opacity "Read more" / "Learn more" link.
IconTile	The 60px solid violet square holding a white 28.78px glyph.
Icon	Wrapper required because the source's Streamline Sharp set cannot be redistributed.

Surfaces

COMPONENT	WHAT IT IS
FeatureCard	The 356px hairline capability card — 48px padding, 68px gap.
ArticleCard	The editorial card: mono kicker, 40px Denim title, underlined link.
StatCard	The 118px stat readout with violet corner block and wordmark footer.
ScanFrame	The bracketed portrait with a mono ID chip.
TestimonialCard	The customer-story module with treated portrait.
EventCard	The webinar module with a mono date readout.

Patterns

COMPONENT	WHAT IT IS
DotGrid	The 22.041px / 0.501px matrix behind every dark field.
SignalField	The dark or violet field carrying an ASCII texture and node markers.
SectionHeader	Eyebrow → headline → muted clause → one CTA.
NavBar	The Desktop - 2 header with announcement strip.
SiteFooter	The closing module with the wordmark ghosted behind the matrix.

Deliberate omissions

- **No logo wall or customer-logo component.** The attached file contains no Bureau customer or partner marks. A stat row is used where the source shows logos, rather than inventing them.
- **No form primitives** (Input, Select, Checkbox, Switch). The scoped frames contain none, and guessing them would put unrecognisable components in front of designers.
- **Four Figma component sets and five vendor logo symbols** (Activity Card, Activity Card/Status, CaretDown, Component 51; airtable, dropbox, livechat, semrush, unsplash logo placeholders) sit on pages outside the scoped frames and belong to unrelated template content, so they were deliberately not built.

Sources and files

SOURCE	WHAT WAS TAKEN FROM IT
Figma: Bureau Design Guideline	The whole foundation. Scoped frames: /Foundation (Style-Guide, Headings, Body, Slide 16:9 - 24) and /Stylescape/Stylescape-V.2. Palette, type scale, logo lockups, ASCII textures, imagery, module and slide layouts.
Denim TRIAL woff2	The brand typeface, trial cut. Copied to assets/fonts/.
uploads/Logos/	Dark wordmark and reversed mark. Copied to assets/logo/.

Values in this system were transcribed from those frames verbatim, including odd numbers — the 22.041px grid cell, the 0.501px hairline, the 118px stat.

PATH	CONTENTS
